

MOKSHA ZALA

Senior iOS Engineer • Swift • UIKit • SwiftUI • 9+ Years Mobile / 6+ Years Native iOS

+91 8733847311 • livedz05@gmail.com • Gujarat, India • linkedin.com/in/mokshag

PROFESSIONAL SUMMARY

iOS Engineer with 9+ years in mobile application development, including 6+ years of dedicated native iOS experience (Swift, UIKit) across production apps deployed to the App Store. Experienced in owning full app architecture and delivery — from requirements through implementation, testing, and release. Additional cross-platform background in Xamarin (C#). Strong UIKit background with hands-on SwiftUI experience. Comfortable working with global, distributed teams, collaborating daily with US-based stakeholders across time zones.

KEY ACHIEVEMENTS

- Owned features end-to-end across multiple production iOS apps — from requirements refinement and architecture through implementation, testing, and App Store release, with clear documentation of architectural decisions for the wider team.
- Architected scalable MVVM + Coordinator modular system using Swift Package Manager across 3 production apps — reusable components and clean separation of concerns that held up across multiple release cycles.
- Eliminated data race conditions across all networking layers by migrating to Swift Concurrency (async/await, actors) — systematic root-cause debugging with Xcode Thread Sanitiser and Instruments.
- Maintained 95–98% crash-free sessions in production with zero P0 incidents in 18+ months — disciplined performance and memory optimisation using Xcode Instruments, Crashlytics, and targeted hotfixes.
- Built XCTest + XCUITest unit and UI test suites achieving 60–72% UI coverage — robust, testable code that reduced regression detection time by ~40%.
- Used the team's Fastlane + TestFlight CI/CD pipeline for builds and owned full App Store Connect submissions — build signing, provisioning profiles, and App Review communication across multiple releases.

WORK EXPERIENCE

iOS Engineer | Talent Systems LLC (StaffMeUp • Spotlight • Casting Networks)

Feb 2023 – Feb 2026

- Owned iOS app architecture and feature delivery for StaffMeUp, a high-scale casting platform — refining requirements with product and design, estimating accurately, and taking features from spec to production release within Agile/Scrum sprints.
- Designed and built reusable UIKit components and modular architecture using MVVM + Coordinator pattern with SPM — documented architectural decisions clearly so the team could build on them across subsequent release cycles.
- Later began transitioning select components to SwiftUI alongside continued UIKit development, building hands-on production familiarity with the framework through incremental adoption and sample projects.
- Implemented Swift Concurrency (async/await, actors) replacing legacy callback chains — eliminated data race conditions and improved thread safety across all networking layers, verified with Xcode Thread Sanitiser.
- Integrated GraphQL and REST APIs (URLSession, Alamofire, Codable) with offline-first local persistence (Core Data, SQLite) and background sync — reliable data capture and recovery across poor network conditions.
- Wrote and maintained XCTest and XCUITest suites achieving 60–72% UI code coverage — reduced regression testing time by ~40%.
- Participated in code reviews, providing feedback on code quality and adherence to Swift/iOS best practices using SwiftLint for static analysis.
- Collaborated asynchronously with US-based stakeholders daily — strong cross-functional communication across a distributed, global team.

Mobile Application Developer – iOS | Spontaneous Enterprise OPC Pvt. Ltd.

Feb 2022 – Feb 2023

- Sole developer across two concurrent product lines — architected and shipped a native Swift/UIKit iOS application from inception to App Store release, and separately maintained a Xamarin Forms (C#) cross-platform application, owning full lifecycle for both.
- Built reusable UIKit components from Figma specs using Storyboards and Auto Layout, applying SOLID principles and dependency injection across the codebase.
- Integrated REST APIs with URLSession and Codable; implemented local data persistence with Core Data and SQLite for offline capability.
- Completed one additional native iOS project independently as a freelancer during this period, managing requirements, development, and release end-to-end.

Mobile Application Developer – iOS | Intricare Technologies

Oct 2021 – Feb 2022

- Built and maintained iOS modules in Swift/UIKit; resolved performance bottlenecks through async image loading optimisations, UICollectionView/UITableView tuning, and Instruments-guided profiling.

Mobile Application Developer | Stemmons Business Services Pvt. Ltd.

Dec 2018 – Jan 2021

- Developed cross-platform enterprise apps using Xamarin Forms (C#) — built document, image, and video management features integrated with REST APIs.

Software Programmer | Kit Solution

Aug 2016 – Dec 2018

- Built native iOS modules using Swift and Objective-C, and Java; integrated ARKit and HealthKit frameworks — established foundational mobile development skills across the full app lifecycle.

TECHNICAL SKILLS

Languages: Swift (primary), Objective-C, Java, C#

iOS Frameworks: UIKit (primary), SwiftUI (actively developing), AVFoundation, Foundation, Combine, Swift Concurrency (async/await, actors), Core Data, SQLite, ARKit, HealthKit

Architecture: MVVM, Coordinator Pattern, VIPER, MVC, SOLID Principles, Dependency Injection, Modular Architecture (SPM) — reusable components and documented architectural decisions

Networking & APIs: REST APIs, GraphQL, URLSession, Alamofire, Offline-first sync, Push Notifications (APNs), Firebase Cloud Messaging, Deep Linking, authentication, error handling

Libraries: Alamofire, Firebase (Crashlytics, Analytics, Remote Config), Kingfisher, Facebook SDK, Social Login (Facebook, Google, Apple)

Testing & Performance: XCTest, XCUITest, Unit Testing, UI Testing, TDD — 60–72% UI coverage; SwiftLint (static analysis & code quality); Xcode Instruments, Thread Sanitiser, memory and performance optimisation

Code Quality: Code reviews, SwiftLint, adherence to Swift/iOS best practices and coding standards

DevOps & CI/CD: Fastlane, Xcode Cloud, TestFlight, App Store Connect, code signing, provisioning profiles

Tools & Workflow: Git, GitHub, Bitbucket, GitLab, Jira, Figma, Sketch — Agile/Scrum, sprint planning, estimation, global distributed team collaboration

Cross-Platform: Xamarin Forms (C#) — enterprise apps with document, image, and video management features

AI Tools: Claude, Cursor, ChatGPT, GitHub Copilot — daily use for generation, refactoring, debugging; disciplined review and validation of all output

EDUCATION

Bachelor of Engineering – Information Technology | Gujarat Technological University | 2013 – 2016

AVAILABILITY

Available immediately for full-time roles. 4+ years of experience collaborating with distributed, global teams across time zones via async communication. Fluent in English, Hindi, and Gujarati.
